

# Navigator™ 2.0.0 Software For DHPLC and WAVE® System Analysis

The new **Navigator Software** incorporates the **Power of Protocols** for easy and complete automation of Assay Design, Analysis and Reporting

Now Compatible with Microsoft® Windows® XP!

**Protocols and Protocol Templates** allow complete automation and pre-programming of all assay parameters including amplicons and methods, physical tray configurations and analysis parameters used in mutation calling.

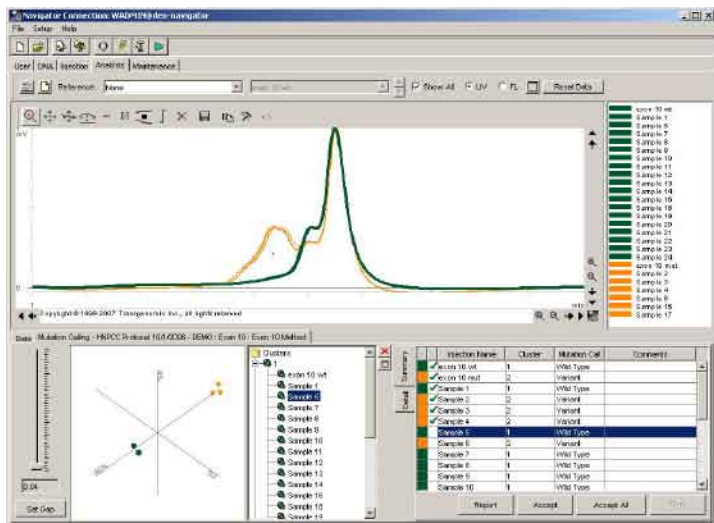

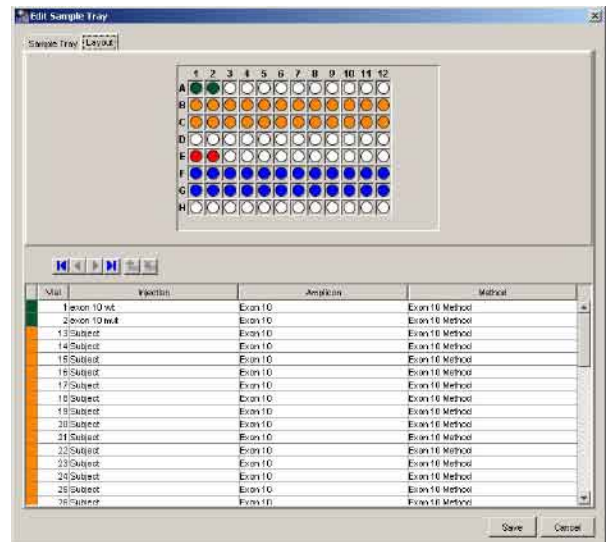

## Updated Features with Protocols and Protocol Templates

### Repeatability

With *unlimited protocol design and capabilities*, Protocol Templates simplify workflow and guarantee consistent results — significantly decreasing setup, analysis and reporting time.

### Easy Tray Setup

- Simply enter the subject names once and pick the tray you want to run. *Navigator* creates the tray with all injections and appropriate controls, subjects, methods and vial locations — automatically.
- All protocol-associated trays are grouped together providing easy access and analysis.

### Automated Mutation Calling

- Once configured, parameters can be automatically applied every time the protocol is run.
- Protocol injection data are grouped by amplicon and method, instead of by tray providing ready-access and easy data analysis.
